

What question is your data going to solve?

I want to build a data analysis that answers the following question about the difference of graphic cards

Prices

Specs of products compared to later years

Brand differences

Nvidia

AMD

Definition of your audience

Gamers

Developers/
Apps

Animators

Films/CGI

Everyday use if you have a heavy workload on a computer.

What datasets do I need?

EDA on GPU Price Trends: New vs. Used NVIDIA & AMD

GPU Specs Database: Nvidia & AMD (1995-2026)

Trends in GPU price-performance

List out your datasets here:

[Nvidia & AMD price trends](#)

[Specs Database: Nvidia & AMD \(1995-2026\)](#)

[GPU Trends](#)

[Benchmarks + Cores](#)

What do you like about each resource and why did you choose it?

Each resource has more information then needed. They are well organized and easy to sort through.

Id like to see each detail and compare for when I put together my next PC soon.

Pain points and frustrations

Performance could also be altered depending on the CPU.

A Good CPU could help the performance of a slow GPU.

Execution
